PROFILE

A Python Full Stack Developer is responsible for designing, developing, and maintaining web applications using both **frontend** and **backend technologies**. They manage the entire development lifecycle, including **database** management, **UI design**, and **API integration**, ensuring seamless functionality and performance.

PROJECT

Brutus Kitchen – Responsive E-Commerce Website

Description: Brutus Kitchen is a **fully responsive** e-commerce website developed using **React.js**. It delivers a clean and intuitive user experience with essential features like product browsing, add-to-cart functionality, and user through signup and login pages. The **UI** is styled with **CSS and bootstrap** for better organization and custom design flexibility.

Tech Stack: **React.js** – for building a dynamic, component-based frontend.

CSS & Bootstrap – for writing structured and maintainable styles

React Router – for smooth navigation between pages.

TODO APP – A Responsive Website

Description: *Todo App is a fully responsive application with a clean and intuitive user interface. It offers a user-friendly experience with organized task management, expert productivity tips, and a visually engaging design for enhanced usability.*

Tech Stacks: **Django (Python)** for backend development, handling business logic and task management. **HTML** for structuring the user interface. **CSS** for custom styling of the layout. **Bootstrap** for responsive design and faster front-end development.
